9 Men Morris Game

Player 2

Moving a Piece

After a player has placed all of their pieces on the board they can begin to move pieces from one position to another if they are connected/adjacent and the position the piece is moving to is not occupied.

The piece in the examples here is moved from the previous position it was sitting to the position immediately above it since that position was empty and they are connected/adjacent.

See the Flying Piece prototype for more complex movement.
